👤 Amr Ahmed

Summary

A motivated .NET developer with strong foundational skills in C#, SQL, LINQ, Entity Framework, ASP.NET Core, and API development. Proficient in designing and implementing scalable solutions using C# and ASP.NET Core, with a focus on performance optimization. Skilled in utilizing LINQ for efficient data querying and optimizing SQL databases for effective data management and retrieval. Eager to apply knowledge and continue learning in a dynamic work environment.

Education

Bachelor's Degree in Information Technology and Systems

2021 – 2025

- Faculty of Management Technology and Information Systems.

Port Said, Egypt

- **Graduation Project** : Raknah, a smart parking system integrated with hardware that helps users find, book, and access parking spots easily while managing reservations and user accounts.

Technical Skills

Frameworks

- ASP.NET Core MVC
- Asp.NET Core API

Client-Side Technologies

- HTML
- Bootstrap
- CSS
- JavaScript
- jQuery

Version Control & Tools

- Git
- Azure DevOps
- Postman
- Swagger
- Visual Studio
- SQL Server Management Studio (SSMS)

Database

- Database Fundamentals
- SQL Server
- Entity Framework Core
- Linq

Programming Language Basics

- C++
- PHP
- Python

Application Architecture

- Object-Oriented Programming (OOP)
- MVC
- Clean Architecture
- RESTful API Design
- SOLID Principles
- Dependency Injection

Certificates

ITI SUMMER TRAINING

2023

Web Development using Asp .Net Core

- SQL Server
- C#
- Linq & EF Core
- Asp.Net Core MVC

Projects

Bookify, *Library Management System (MVC Web Application)*

A web application developed using ASP.NET Core MVC following the Clean Architecture approach to manage public library operations. It allows subscribers to rent and return books, and provides an admin panel for managing users, books, and reports.

- Implements authentication and ASP.NET Core MVC using ASP.NET Identity.
- Features include pagination, search, and report generation to monitor rental activities.
- Built using Entity Framework Core for data access and Clean Architecture for separation of concerns and maintainability.
- The frontend was customized using a ready-made Bootstrap template for a responsive and user-friendly UI.
- **Technologies:** ASP.NET Core MVC, Entity Framework Core, SQL Server, Bootstrap, ASP.NET Identity, Clean Architecture

Raknah, *Parking Management System*

A parking management system developed as an API using ASP.NET Core, with Entity Framework Core for database management. The system is integrated with ESP32 for real-time parking spot monitoring and hardware connectivity, and it will be connected to a mobile application for easier user interaction.

- Features include user authentication, parking spot management, and reservation handling via the API.
- Real-time data is exchanged between the backend, mobile app, and hardware (ESP32) to dynamically monitor parking spots.
- Implemented Result pattern for consistent error handling and clear API responses.
- Centralized exception handling and integrated Serilog for structured logging and monitoring.
- Built to ensure scalability and performance, using SQL Server for efficient data storage.
- **Technologies:** ASP.NET Core, Entity Framework Core, SQL Server, ESP32, Mobile App Integration, Result Pattern, Serilog

SurveyBasket, *Survey Management API*

A web API developed using ASP.NET Core to manage surveys and send notifications. Designed with a focus on performance, security, and maintainability.

- Integrated Hangfire for managing background jobs like sending scheduled notifications.
- Implemented Serilog for structured logging and better traceability.
- Used Dependency Injection to maintain clean and testable architecture.
- Applied in-memory caching to optimize performance.
- Centralized error handling and used the Result pattern for consistent exception management and response formatting.
- Enforced CORS and HTTPS to secure data communication.
- **Technologies:** ASP.NET Core, Hangfire, Serilog, In-Memory Caching, Dependency Injection, Result Pattern
